

# Margot Helps In The Garden

By Jill and Margot Kemp

Pop has got two compost bins  
to make compost for his garden.  
“Your compost needs some water,” said Margot.

He has a worm farm too.  
Worms eat left overs from your lunch and make  
worm castings used to feed and fertilize the soil.

Pop and Margot went to the shop  
to buy some lettuce plants.  
“These are strong plants,” said Pop.

Margot played in the play area.  
Then she went to the Check Out  
to pay for the lettuce plants.

Pop digs worm castings  
and compost into the soil  
ready to put in the new plants.

Margot showed Pop how  
to make a line with a stick and  
plant the little lettuces in a row.

She waters all the plants  
with worm wee which helps  
the plants grow really well.

Then Margot harvested some  
beetroot out of Pop's garden.  
"These will be healthy to eat," she said.

Pop and Margot shook the dirt off and cut the leaves from the top of the beetroot.

“Gran,” said Margot, “I picked some fresh beetroot and broccoli from the garden, for us to eat. ”

Margot helped to cook the beetroot.  
When it was cold she took off  
the skin and sliced it up.

Margot made a wrap for lunch with  
lettuce and beetroot from the garden.  
Healthy food is delicious!
